**8.0 Trouble Calls - JCALS and idms** (October1, 1997). . . 8-1

**Important Note**

### **Important Note**

**The features currently described in this User Guide are only the main items available with the JCALS/IDMS system. There are many more tools, or features, which will be explained in other documentation.**

**The current JCALS/IDMS software version is being updated with many improved and enhanced features. These updates can involve one or more modules.**

**The majority of the software changes can be automatically loaded, via an “automatic update process”. This occurs when a user opens an outdated module within the JCALS/IDMS application. The outdated module files will then be updated while that module opens. A user can also download via the internet, or receive a CD ROM with the necessary files for an update. Current plans are to achieve 100% of the updates using the “automatic update process.”**

**PHD NSWC appreciates any suggestion, from the users of the JCALS / IDMS system, which would improve or simplify its use.**
